

# LIVE WALLPAPER

## A.)CATEGORY:

Live Wallpaper Category

## B.)IDEA AND IMPLEMENTATION:-

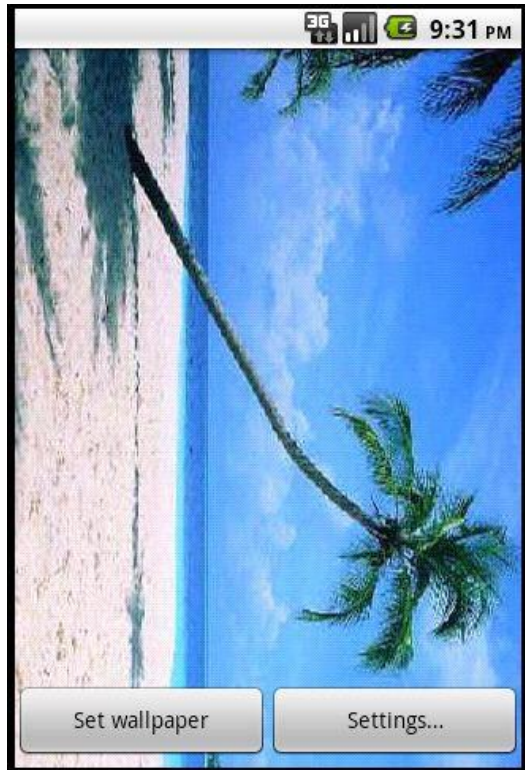

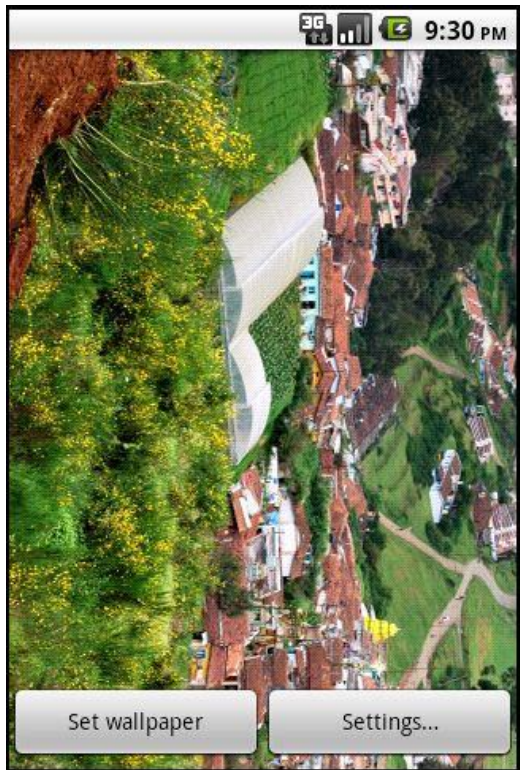

- A **Live Wallpaper** is a type of application that works on a mobile device using the Android operating system. The application works as a wallpaper – providing the background image for the home screen—but also works as a conventional application.
- Since it can provide user-interaction with the touch screen (allowing the image to change dynamically, for example) and access other hardware and software features within the device (accelerometer, GPS, network access, etc.).
- This is a Attractions Live Wallpaper . very beautiful and attractive tourist places pics can be shuffled or moved on android home screen after a duration . This duration can be set by user.

- 1) For run the live wallpaper go to your home screen  
Now press Menu →Wallpaper →Live Wallpaper

Live wallpaper will be loaded to the home screen.

After 1 or 2 secs. Different-2 places pictures will be shown to you like this.  
Here is screen shot for this.

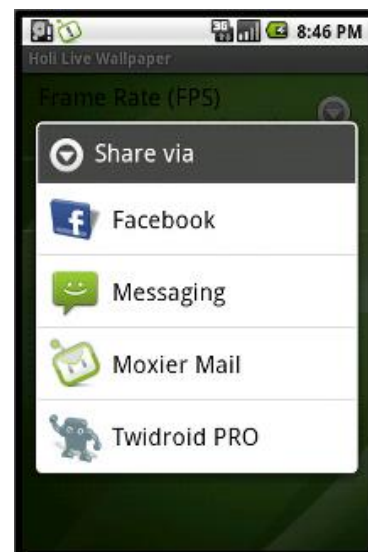

There are two different options are showing in this screen .

#### Settings :-

In settings section a person can set duration how fast these wall papers will move on its android phone home screen.

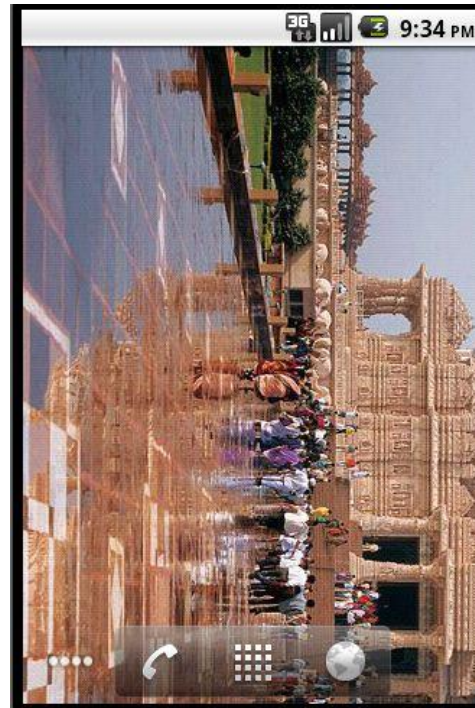

User can share this with your friends through social networking sites like facebook, twitter, gmail and messaging etc.

Ads feature(Mobclickx , Airpush SDK) is also integrated at its bottom , so that user can know other things also .

**Set Wallpaper** :- This option allows you to set the wallpaper on the home screen with the rate of shuffling that you set in **Setting** section . At home screen these are some screen shots , How this Live wallpaper will look like at your device's home screen.

Enjoy these beautiful wallpapers and share app with friends and many more setting options will be added in [Setting](#) section.
